

MODEL PNEUMATIC “FALSE TARGET, (SPGH NORA B-52 M-17, MLRS “TAMNAVA”, TANK M-80)

PURPOSE:

- for effectively and reliably deceiving and exhausting the opponent and discovering his firing positions during action and real intentions, because mock-ups allow simple and easy formation of false firing positions of weapons or tools, as well as the line placement of batteries or divisions (on arranged false firing positions),
- indirect protection against the destruction of one's own forces and assets and protection against the discovery of one's own intentions (essential in the conditions of the application of modern reconnaissance and surveillance equipment),
- the successful application of methods of deceiving the opponent is a planned and organized activity in conditions of complete secrecy.

KIT COMPOSITION:

- pneumatic construction of the armored body,
- integrated pneumatic construction of the turret (or launcher),
- tools and accessories (blower for filling with air, stakes and cords for anchoring structures and accessories for minor repairs)
- cases for packing and carrying pneumatic constructions.

TECHNICAL CHARACTERISTICS:

- they are made of the most modern composite materials based on fabric layered with different layers of synthetic rubber, which is resistant to the influence of alkaline substances, sunlight, high humidity, high insolation and temperature fluctuations (resistant to aging in the conditions of the natural environment),
- the mass of rubberized fabric per 1 m² is less than 1000 g.
- the quality of the material ensures uninterrupted operation for a period of at least ten years,
- there is an option of applying the material for one-time use of the means for a storage period of no longer than one calendar year (on the basis of layered PVC fabric).

Hypalon with high production standards	
Base fabric	Polyester high tenacity 1100 dtex/1670 dtex
External coating	Chlorosulfonated Polyethylene(CSM)/Neoprene(CR)
Internal coating	Neoprene(CR)/SBR
Hypalon surface color	Dark gray, Medium gary, Light gary, Black, White, Yellow, Red, Blue, Dark blue, An green, Orange. (Special colors can be customized)
Neoprene back color	Gray
Width and length	1.5M width, 50M length per roll. (Special size can be customized)
Surface of product	Free of impurities 、 bubbles and dirty. No joint

THE USE OF:

- the mass of the set enables the unhindered work of the crew-service on manipulation and setting up false firing positions,
- the pneumatic structure takes the desired shape after being filled with air and must be “anchored” with stakes and ropes to the ground, and after emptying the air, it is packed in cases (bags) for packing and carrying.

MAINTENANCE:

- easy and simple, and refers to cleaning with a damp cloth and drying at room temperature,
- repairs of damaged or punctured parts of pneumatic constructions are carried out on a smaller scale by the users themselves (with rubber patches that are stuck to the damaged places), and repairs of larger damages must be carried out by the supplier/manufacturer.
