

CLIP-ON

Night vision

The Clip On - Long Range is a night vision unit that mounts in front of an existing day scope and converts the day scope to night vision capability up to ranges of 1000 yards. The Clip-On can be mounted/dismounted on a standard Picatinny rail in seconds with no tools required. Because the Clip-On is mounted in front of your day scope, the shooter's eye relief is not altered and shot release and follow through all remain intuitive. Because the unit is factory bore-sighted to better than 1MOA accuracy, no alteration in zero is experienced so it is as simple as mount-focus-shoot, just as it would be in day time.

|-------------------------------|-------------------------------|
| • Magnification | x1 |
| • Compatible IIT type | Gen 3 |
| • Objective system | 108 mm, f/1.54 |
| • Range of focus | 10 m to ∞ |
| • Exit pupil diameter | 40 mm |
| • LED Indicators | Low battery |
| • Power source | One CR123A (3V) or AA (1.5 V) |
| • Operational time | Up to 40 h at 20°C |
| • Dimensions | 242 x 100 x 88 mm |
| • Weight | 0.91 kg |
| • Operating temperature range | -40°C to +50°C |
| • Storage temperature range | -50°C to +50°C |
